

I believe BPL implementation would cause undue interference to all services operating in the HF and low VHF bands. These include Shortwave broadcasts, military and civilian communications, Ham radio, WWV-WWVH time signals and other important services.

Please consider the technical investigation work already performed by the ARRL and other organizations. It is clear the BPL would adversely effect numerous services that are essential in this time of heightened Homeland Security.

Please visit <http://www.arrl.org/announce/regulatory/et03-104/> for the ARRL's findings.

Sincerely,  
Christopher Rumbaugh  
K6FIB  
Emergency Coordinator  
Marion County (Oregon) Amateur Radio Emergency Service
